

BIMETAL HEAT EXCHANGER

Gas Boiler heat Exchanger

Since 1997, the design of primary heat exchangers for boilers is the strength of our company.

The highest point of this activity has been reached by acquiring a foundry of cast iron and casting aluminium (former Gruppo Imar) through the controlled company Rexnova S.r.l.

Today we can offer a big range of cast iron heat exchangers, cast iron-cast aluminium heat exchangers, suitable for gas burner, oil burner, wooden pellet burner and olive pellet with heat power from 10kW (34MBT) to 110kW (375MBT).

We are developing primary heat exchangers with heat power to 250kW (850BT).

In this section you can find bimetal and not bimetal heat exchangers, used for wall hung boilers and floor standing boilers supplied with natural gas or LPG.

In BIOMASS section you can find the range of our heat exchangers which can be used in this field.
